What we'll cover

01

The big picture

02

Context

03

Why this matters

04

Your challenge

05

What to hand in

06

How we'll judge

The UK keeps a lot of money in cash

£911bn

sitting in easy-access savings accounts[1]

£306bn

in accounts that pay no interest at all[1]

61%

of adults with £10k+ to invest keep at least three-quarters of it in cash[2]

Cash feels safe, but when interest rates are low or don't keep up with prices, it slowly buys less.

[1] AJ Bell, using Bank of England data, September 2026. [2] FCA Financial Lives survey (May 2024), published May 2025.

From April 2027, the ISA rules change

Every tax year, you can put up to £20,000 into ISAs, where interest and investment growth aren't taxed.

From 6 April 2027, people under 65 can only put £12,000 of that into a cash ISA. To use the other £8,000 tax-free, they'll need to invest it.

The government's stated aim: get more people investing.

Today

From 6 April 2027 (under 65s)

Total ISA allowance stays at £20,000 a year

Source: HM Treasury / HMRC, "Cash ISA limit reduction", gov.uk.

Chase in the UK

Sept 2021

launched in the UK, app only

2.5m+

customers by end of 2025

£26bn+

in deposits by end of 2025

The Chase app

Everyday banking and savings: the current account and savings products such as the Chase Saver. Saver rates change over time, and boosted rates don't last forever.

J.P. Morgan Personal Investing

Managed investments today, with brokerage launching soon so customers can pick their own investments too. ISA, pension or general account, with a yearly fee. Customers start in a separate app.

Both platforms are part of JPMorgan Chase (JPMC).

Why this matters

Many customers leave money in current or savings accounts that they don't need day to day. When a boosted saver rate ends, it often just stays there.

POSSIBLE REASONS · ASSUMPTIONS FOR YOU TO TEST

How much is safe?

They may not know how much they can put away without leaving themselves short.

It feels risky

They may see investing as risky and worry about losing money.

Where do I start?

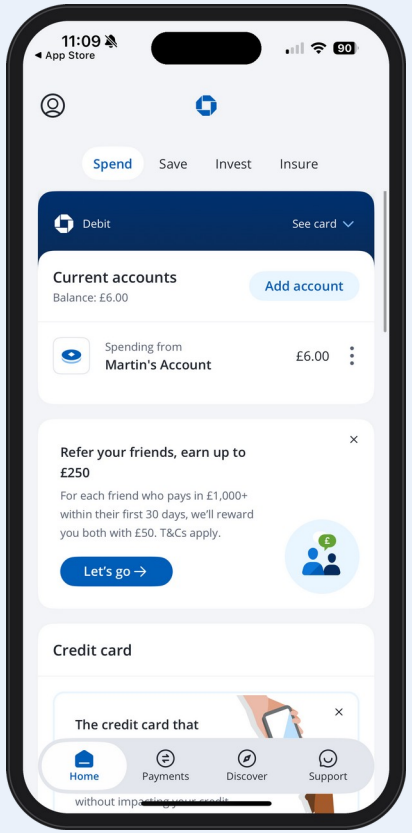

They may not know where to start, or it never feels like the right time.

Out of sight

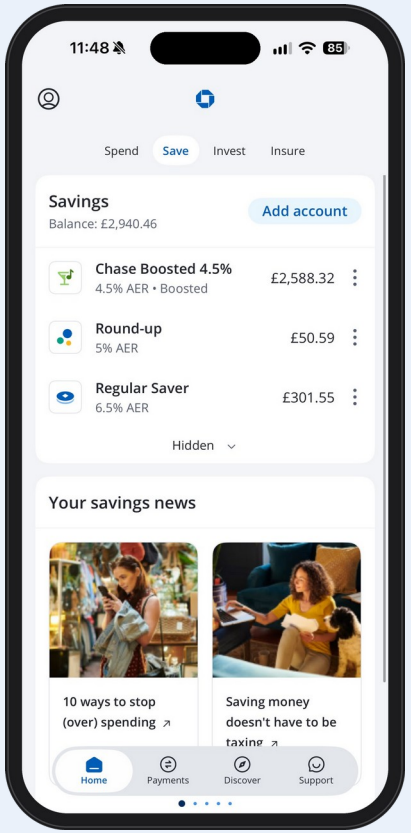

Investing sits in a different app from everyday banking, so it may be easy to forget.

Customers who bank, save and invest with Chase are less likely to leave. But it has to be right for the customer, not only for the bank.

YOUR CHALLENGE

How can Chase encourage more customers to start investing, and existing investors to invest more, with J.P. Morgan Personal Investing?

Help Chase do at least one of these

1

Get more customers to start investing for the first time

2

Grow how much existing investors put in

3

Move money sitting idle in cash into investments

Unified experience

Customers should see J.P. Morgan Personal Investing as part of Chase, not a separate or less important product.

Think across products

Your idea doesn't have to sit in one product. What a customer does in one account could change what they get in another.

Some questions to think about

1

What underlying problem does your solution address?

Why aren't people investing today? Get to the real reason.

2

What customers are you targeting?

Be specific about the group, and how many customers you aim for.

3

Is the solution commercially viable?

How would you price it (rates, fees, bonuses)? What does it cost, and what does Chase get back? Keep it realistic and on brand.

4

What risks does your solution have?

For the customer and for Chase, and how you would handle them.

Keep it fair: Consumer Duty and AI

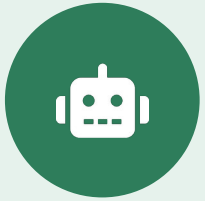

Consumer Duty

The FCA expects banks to deliver good outcomes for everyday customers. This is the Consumer Duty, in force since July 2023.

Chase can't push people into products that aren't right for them. Anything it offers has to be clear, fair and good value.

A great idea that pushes people too hard won't get past the regulator.

Be careful with AI

AI ideas are welcome, but don't go overboard. Banking is a heavily regulated environment.

AI that gives personal advice, makes decisions for customers or uses their data raises big regulatory questions.

Keep any AI realistic, explainable and safe for customers.

What to hand in

1. Presentation slides

For a 5-minute pitch. Your slides should cover:

- Who is it for, and what do they need?
- What does it do, and how does it work?
- Why is it good for the customer?
- What are the risks?
- Why would Chase do this?
- How does it make money?

2. A working prototype

Embedded in your slides.

Something we can see in action, not just static screens. A clickable Figma design, a simple app, a coded demo, or anything you're comfortable with that shows the customer experience.

How we'll judge

Commercial feasibility

Does it make business sense for Chase? Will it grow investing, and is it worth what it costs?

Technical feasibility

Could Chase realistically build it across the Chase app and J.P. Morgan Personal Investing?

Design review

Is the prototype clear, simple and easy for a customer to use? Does it feel like one Chase?

Presentation quality

Is the story clear and well structured? If you used AI, did you apply your own judgement?

Risk and success metrics

Have you considered the regulated landscape we operate in? How will you measure success?

Scoring guide: 1 to 5

Criterion	1 · Weak	2	3 · Solid	4	5 · Excellent
Commercial feasibility	No clear reason for Chase. Costs and revenue ignored.	Some benefit named, but vague or unrealistic.	Clear benefit to Chase. Rough costs and revenue considered.	Sound business case with stated assumptions. Clearly grows investing.	Compelling, well-evidenced case. Numbers, assumptions and trade-offs all clear.
Technical feasibility	Couldn't realistically be built.	Possible, but big gaps in how it would work.	Buildable on existing platforms. Main steps explained.	Clear how it fits the Chase app and J.P. Morgan Personal Investing.	Realistic, well-scoped build. Data, integration and rollout thought through.
Design review	No prototype, or the experience is unclear.	Basic screens that are hard to follow.	A clear core journey a customer could follow.	Polished, intuitive flow that feels like one Chase.	Excellent, customer-centred experience. Every step simple and purposeful.
Presentation quality	Unclear story. AI output used without judgement.	Some structure, but hard to follow.	Clear story. Sensible use of any AI.	Engaging and well structured. Strong judgement.	Compelling and confident. Any AI use handled with excellent judgement.
Risk and success metrics	Regulation ignored. No way to measure success.	Regulation mentioned in passing. Vague success measures.	Key regulatory points covered. Clear success metrics.	Specific regulatory risks with mitigations. Measurable, relevant metrics.	Strong grasp of the regulated landscape. Targets and metrics tied to the goals.

Ground rules

- Use any public information. If you quote a big fact or figure, tell us where it came from.
- Your idea doesn't need to match anything Chase already does or has planned.
- If you need a number you can't find, make a reasonable assumption and say so.
- We'd like to hear from more than one person on your team during the pitch.
- Want to see how the Chase and J.P. Morgan Personal Investing apps look? Download and explore the apps.
